Corner Brook Long Term Care Home Resident Experience

Background

Survey Instrument

The validated Consumer Assessment of Healthcare Providers and Systems (CAHPS) Nursing Home Survey: Resident Instrument (Appendix A) developed by Alberta Health Services in Canada was administered to long term care residents throughout the Western region. This instrument was piloted throughout rural facilities within Western Health in 2010. In keeping with the results of the pilot, this instrument was modified in 2013 and was used to assess long term care resident experience. In 2015/16, this same modified survey was used to evaluate resident experiences and administered electronically through Google Forms.

Method

The long term care resident experience surveys were administered face to face with those residents who were deemed competent by a nurse to complete the survey. Survey administrators were different at each site; volunteers administered surveys at some sites, while students or nurses on ease-back administered surveys at other sites. For the Corner Brook Long Term Care Home, a nurse on ease-back administered the survey.

Participants

A list of long-term care residents was compiled for each long-term care facility throughout Western Health. The list indicated which residents were able to complete the survey and was provided to those responsible for administering the survey.

Sample

Surveys were administered to all residents who were cognitive, not hard of hearing, and willing to participate for a total of 88 participants regionally. For the Corner Brook Long Term Care Home specifically, there were 39 residents who completed the survey.

Privacy, Confidentiality, Data Security

Privacy and confidentiality were achieved as the residents names were not reported on the surveys. Any information that could potentially identify the residents was deleted. The data was stored on a password-protected computer in the Western Memorial Health Clinic used by Information and Quality staff.

Data Analysis

Survey data was entered directly into Google Docs then transferred to an SPSS data file. Descriptive statistics were calculated on regional data to obtain a general perspective of residents' experiences with long term care services at Western Health. Statistics were also calculated for each site where the sample was sufficient to assist in quality improvement initiatives and planning at a site level. The following report provides survey results for Corner Brook Long Term Care Home.

Results

Demographics

A total of 39 participants completed the survey. To gain a more thorough understanding of the demographics of the long term care residents, respondents were asked for their year of birth, gender, race or ethnicity, and whether they had difficulty with the English language. Of the 39 residents who reported their birth date, the average age was 83, and the median age was 88 (ranged from 50 years of age to 102 years of age). Just over 51% of the respondents were female and 48.7% were male. The majority of respondents were white/Caucasian (97.4%) and the remaining 2.6% did not indicate. One hundred percent of the residents reported not having difficulty with the English language.

Respondents were also asked about highest level of school completed, whether they had a roommate, and personal health rating. Two point six percent of residents reported having some university or college, 2.6% reported completing a university degree, 5.1% reported completing a college diploma, 76.9% have grade school or some high school, 7.7% reported post-secondary technical school, and 5.1% reported completing high school. Ninety seven point four percent of residents reported not having a roommate and 2.6% reported that they had a roommate. Respondents were asked to indicate how they would rate their overall health and 2.6% reported excellent, 25.6% reported very good, 17.9% reported good, 25.6% reported fair, 25.6% reported poor and 2.6% did not report.

Meals

Residents were asked to rate food quality and mealtime enjoyment on a scale of 0-10 (with 10 being the best possible). On average, respondents rated food quality at 7.09 (range 2-10, standard deviation 2.227). Fifty one point three percent reported that they ate in the dining room and when asked how they would rate their mealtime enjoyment in the dining room, the average rating was 8.90 (range 5-10, standard deviation 1.518).

Environment

Respondents were asked to rate the home in relation to temperature and cleanliness. On average, respondents rated the temperature at 8.18 (range 3-10, standard deviation of 1.991) and respondents rated cleanliness at 9.61 (range 4-10, standard deviation 1.152). Respondents were also asked to indicate how safe and secure they felt in the home, and on average respondents reported 9.79 (range of 8-10, standard deviation of 0.528).

Respondents were asked to indicate whether the area around their room was quiet at night and 84.6% reported yes, 12.8% reported sometimes, and 2.6% did not report. The majority of respondents reported that they were not bothered by noise during the day (82.1%), 2.6% reported that they were, 12.8% reported sometimes, and 2.6% did not report. Privacy is also an important component of environment. When respondents were asked if they could find a place to visit in private if they had a visitor, 97.4% reported yes, and 2.6% did not report.

Medication

Seventy four point four percent of respondents indicated that they took medication to help with aches or pain. On a scale of 1-10, respondents rated the medicine at 8.93 (range 1-10, standard deviation 2.017) in how well it worked to help with aches or pain. On average, respondents rated how well staff helped them when they had pain at 9.31 (range 4-10, standard deviation 1.650).

Resident Care

Several rating questions were asked about nursing care in relation to gentleness, respect, listening, explaining things in a way the residents could understand, and overall care (see Table 1). The majority of residents rated aspects of resident care highly.

Table 1. Resident Care

Aspect	Mean	Range	SD
Gentleness of Staff	9.56	5-10	1.260
Respectfulness of Staff	9.53	5-10	1.390
Staff Listen	8.87	2-10	2.108
Staff explanation & ease of understanding	9.20	5-10	1.389
Rating of Staff Care	9.55	3-10	1.389

Respondents were also asked to indicate if the staff made sure they had enough personal privacy when they dressed, showered, or bathed and 82.1% reported yes, and 17.9% did not report. Seventy six point nine percent of respondent reported that they received the help they needed from staff to stay clean, 5.1% reported sometimes, and 15.4% did not report. On average, respondents rated how quickly the staff came when they called for help at 8.50 (range 2-10, standard deviation 2.203). .

Medical Care

Respondents were asked if they visited a doctor or nurse practitioner for medical care outside or inside the long term care home. Five point one percent reported visiting a doctor or nurse practitioner outside the long term care home, and 89.7% reported visiting one inside the long term care home. When asked if a doctor is available when they needed one, 89.7% reported yes, 5.1% reported sometimes, and 5.1% did not report. .

Autonomy and Control

When respondents were asked whether they were left sitting or lying in the same position for so long it hurt, 5.1% reported yes, 51.3% reported no, 7.7% reported sometimes, and 35.9% did not report. The individuals who

did not report were those who did not need help moving or repositioning. When asked if they were able to reach the call button by themselves, 94.9% reported yes, 2.6% reported sometimes, and 2.6% did not report. When asked if there was a pitcher of water or something to drink where they could reach it by themselves, 89.7% reported yes, 23.3% reported no, 7.0% reported sometimes, and 2.3% did not report.

Respondents were asked about decision-making and whether they chose what time they went to bed, clothes they wore, and activities in which they participated (Table 2). They were also asked if there were enough activities for them to do on the weekends and 10.3% reported yes, 56.4% reported no, 7.7% reported sometimes and 25.6% did not report. When asked if there were enough activities during the week 66.7% reported yes, 2.6% reported no, 5.1% reported sometimes and 25.6% did not report.

Table 2. Choices (%)

Choice	Yes	No	Sometimes	No response
Bed time	89.7	5.1	2.6	2.6
Clothes	92.3	0.0	5.1	2.6
Activities	76.9	5.1	0.0	17.9

Emotions

Respondents were asked to indicate how often they felt worried, happy, bored, and lonely (Table 3). Although most respondents reported being happy often or sometimes, respondents also reported being worried, bored or lonely often or sometimes.

Table 3. Emotions (%)

Emotion	Often	Sometimes	Rarely	Never	No response
worried	2.6	23.1	17.9	53.8	2.6
happy	69.2	15.4	12.8	0.0	2.6
bored	20.5	17.9	10.3	46.2	5.1
lonely	30.8	17.9	12.8	35.9	2.6

Future Planning

Respondents were asked whether they had a discussion with family or a close friend about what healthcare treatment they wanted or did not want if they became ill and could not speak for themselves. Seventy one point eight percent of respondents reported yes, 12.8% reported no, and 15.4% reported don't know. When asked if they ever had a discussion with a healthcare professional or long term care staff about what healthcare treatment they wanted or did not want if they became ill and could not speak for themselves, 64.1% reported yes, 28.2% reported no, and 7.7% reported don't know. When asked how important they felt it was to have this discussion with a health care professional or long term care home staff, 38.5% reported extremely important, 38.5% very important, 12.8% somewhat important, 7.7% not very important, and 2.6% did not report.

Overall

When respondents were asked whether they would recommend this long term care home to others, 79.5% reported definitely yes, 7.7% reported probably yes, 2.6% reported probably no, 7.7% reported definitely no, and 2.6% did not report. When asked to rate the long-term care home, on average, they rated the home at 8.89 (range 1-10, standard deviation 2.115). Nearly 80% reported that they were satisfied with how they spent their time in the home, 5.1% reported they were not, 12.8% reported that they sometimes were, and 2.6% did not report. When respondents were asked to rate their life, on average they rated their lives at 6.94.

Opportunities for Improvement

Overall results indicate that the Corner Brook Long Term Care Home services have many strengths including the respect, communication and gentleness of staff with residents, and respecting the privacy of residents by providing a private space for residents when they have visitors. Residents rated aspects of the environment including cleanliness, security and noise highly as well. There were areas that demonstrated improvement from the 2013 survey results, including mealtime enjoyment in the dining room, the alleviation of pain by staff and medication, and access to medical care, especially the availability of a physician.

For Corner Brook Long Term Care Home, opportunities for improvement include:

- Enhancing meal quality;
- Ensuring residents receive necessary help to stay clean;
- Increasing availability of activities on the weekends and during the week;
- Exploring opportunities to alleviate residents worry, boredom and loneliness;
- Providing opportunities for residents to plan their future wants and needs if they became ill and could not speak for themselves.
