Dr. Charles LeGrow Health Centre Acute Care Patient Experience January to March 2013

Prepared by:
Darlene Welsh
Regional Manager Research and Evaluation
Quality Management and Research Branch

Acute Care Patient Experience Background

Survey Instrument

The validated acute care patient experience survey that was administered throughout the Western region was an Accreditation Canada Client Experience Survey based on the Hospital Care Quality Information from the Consumer Perspective (HCAHPS). The Accreditation Canada Client Experience Survey was modified to meet the needs of Western Health (See Appendix A).

Method

Acute care patient experience surveys were mailed to the sample. This package included a cover letter, survey, and preaddressed and postage paid return envelope.

Participants

A list of patients, 16 years and older, utilizing acute care services from facilities within Western Health and discharged from January to March of 2013 were obtained from Information Services. These patients were categorized by site. Mental Health was not included in this survey as these patients will be included under the Mental Health services when the community based/ambulatory care services are evaluated. Other patients excluded from these data were patients residing in long term care facilities, respite patients, palliative care patients, and all patients under 16 years of age. Also, measures were taken to ensure that surveys were not sent to patients who were deceased. Some surveys were returned unopened as the address was incorrect, incomplete or the person had moved.

Sample

Based on acute care discharges from January to March of 2013, a 95% confidence level, a 5% confidence interval, and considering a 35% response rate, a random sample was calculated. Given that the number of acute care discharges in Dr. Charles LeGrow Health Centre (CLHC) was relatively small, most patients were sent surveys. The total number of those patients discharged from acute care at CLHC in this time period, and excluding the patients as described in the previous section, was 159. A total of 135 surveys were distributed to patients discharged from CLHC.

Privacy, Confidentiality, Data Security

Privacy and confidentiality were achieved as the patients voluntarily completed the survey and returned the completed survey in a postage paid, preaddressed envelope with no identifying information or codes on the envelope or survey to identify the person. Any information that could potentially identify the patients was deleted. The data was stored on a password protected computer and surveys were stored in a locked office in the Western Memorial Health Clinic used by Quality Management and Research staff.

Data Analysis

A student completed the data entry for all surveys using Statistical Package for Social Sciences. Descriptive statistics were calculated on regional data to obtain a general perspective of patient experiences with acute care services at Western Health. Statistics

were also calculated for each site to assist in quality improvement initiatives and planning at a site level. The following sections provide survey results for CLHC specifically.

Results

Demographics

A total of 135 surveys were distributed. Over the three month period, 53 of the 135 surveys were completed for a response rate of 39%.

To gain a more thorough understanding of the demographics and health of the survey respondents, they were asked to report their age group (See Figure 1) and their highest grade or level of school completed (See Figure 2.) They were also asked to rate their overall health. The majority of the respondents were over the age of 60 (81.1%). 67.9% had less than high school, 20.8% had high school or equivalent, 9.5% had some college or graduated from college, and 1.9% did not report. When asked to rate their overall health, 37.8% reported very good or excellent, 54.7% reported good or fair, and 7.5% reported poor.

Figure 1. Age of Respondents

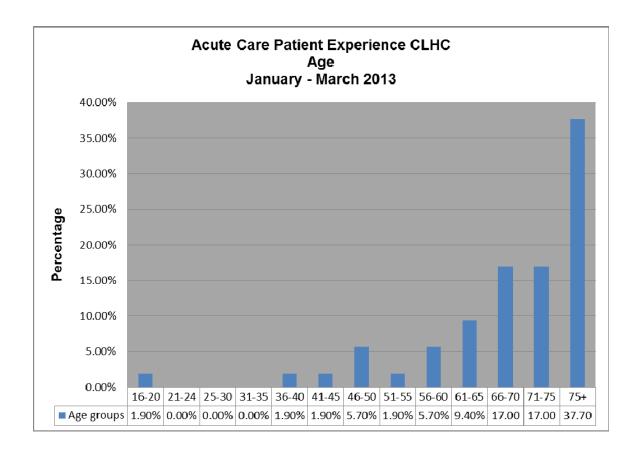

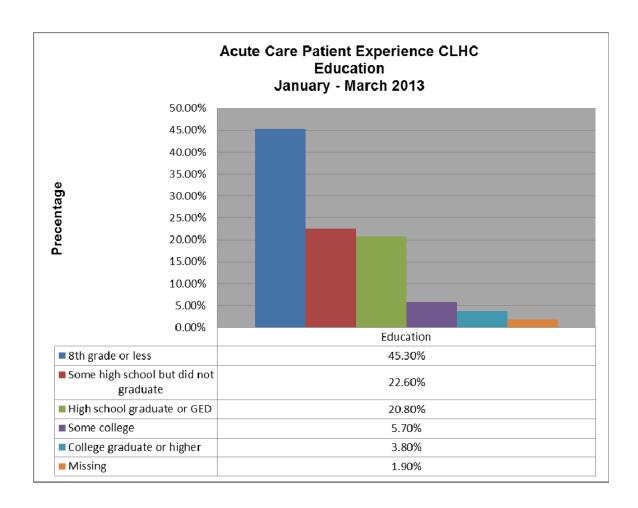

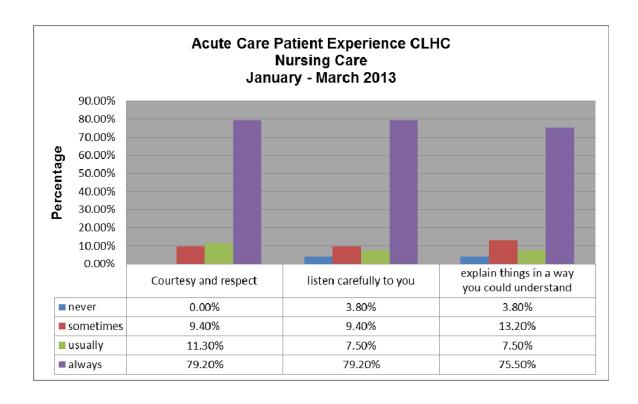

Figure 2. Highest Level of Education

Nursing Care

Patients were asked about nursing care. Most patients reported that nurses always or usually treated them with courtesy and respect (90.5%), listened carefully to them (86.7%), and explained things in a way they could understand (83.0%) (See Figure 3). Respondents were also asked to indicate after they pressed the call button, how often they got help as soon as they wanted it. Of those who pressed the button, 87.2% reported that they always or usually got help as soon as they wanted it.

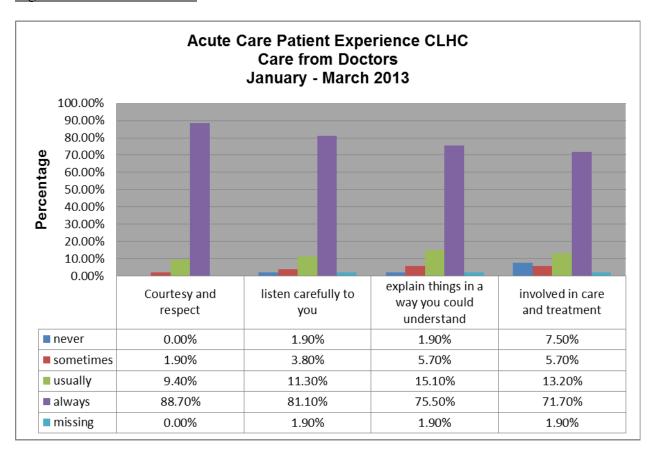

Figure 3. Nursing Care

Care from Doctors

Patients were also asked about the care they received from doctors. Consistent with the feedback about nurses, most patients reported that doctors always or usually treated them with respect and courtesy (98.1%), listened carefully to them (92.4%), explained things in a way they could understand (90.6%) and involved them in their own care and treatment (84.9%). See Figure 4.

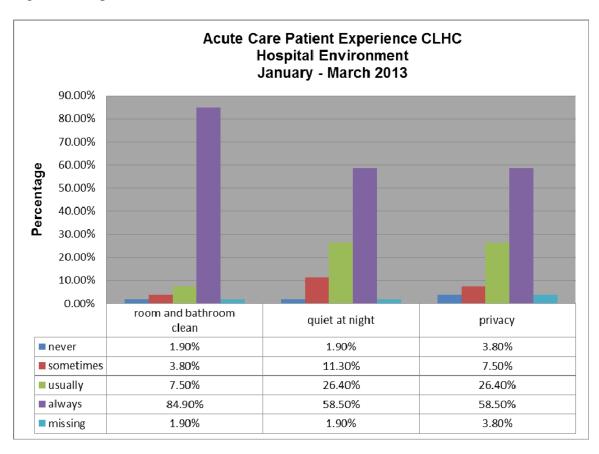

Figure 4. Care from Doctors

Hospital Environment

Patients were asked about hospital environment including cleanliness, quietness, and privacy (See Figure 5). Most patients reported that their rooms and bathrooms were usually or always kept clean (92.4%), it was always or usually quiet at night (84.9%), and that they always or usually had the privacy they needed (84.9%).

Figure 5. Hospital Environment

Hospital Meals

Patients were asked whether their meal was the right temperature and if they were able to eat the meals provided. 73.6% reported that meals were always or usually the right temperature and 75.5% reported that they could always or usually eat the meal provided (See Figure 6). When respondents reported that they could never or sometimes eat the meals provided, they were asked why. Comments indicated that as a result of sickness, they did not have an appetite, or that the food was too cold and that there was no taste.

Respondents were also asked to rate the quality of the meals on a scale of 1-5 (1 being very poor and 5 being very good). 83% reported that the meals were very good or good (See Figure 7).

Figure 6. Hospital Meals

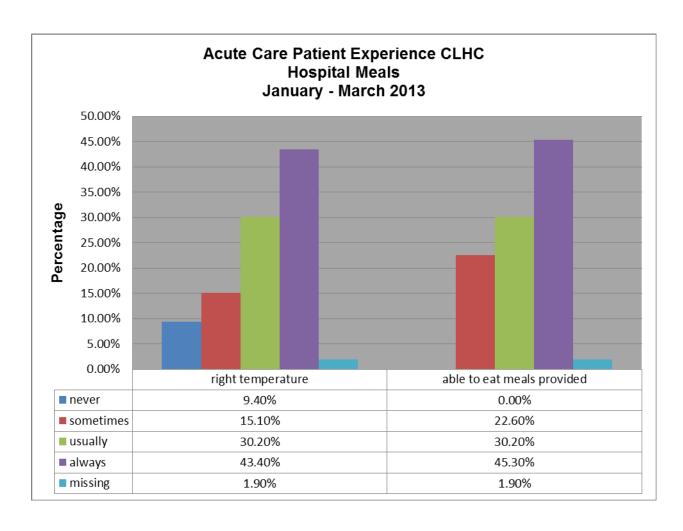

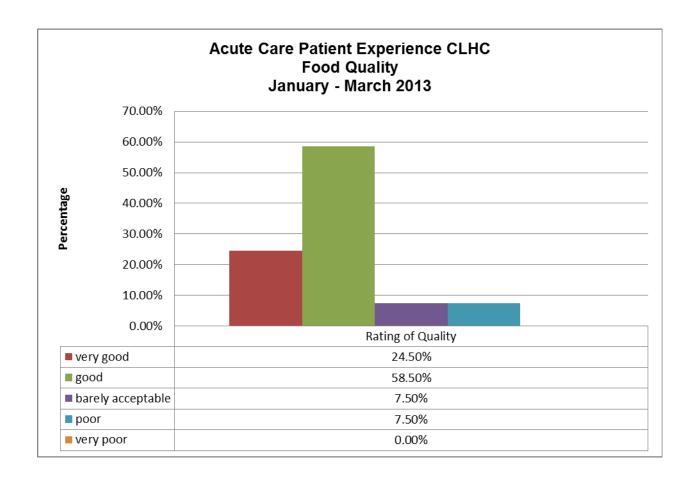

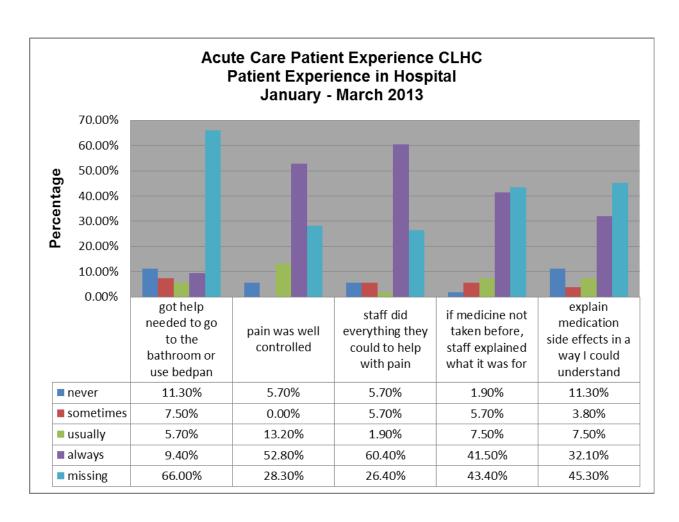

Figure 7. Quality of Food

Patient Experience in Hospital

Patients were asked about their experiences while in hospital concerning receiving help when needed, pain control and information on medications (See Figure 8). Forty four point five percent of patients reported that they always or usually got the help they needed to go to the bathroom or use a bedpan. Just over 92% reported that their pain was always or usually well controlled and that staff did everything they could to help with pain (84.7%). When asked if the staff explained what the medication was for if they had not taken it before, 86.6% reported always or usually. However, only 72.4% of the respondents reported that the medication side effects were always or usually explained in a way they could understand.

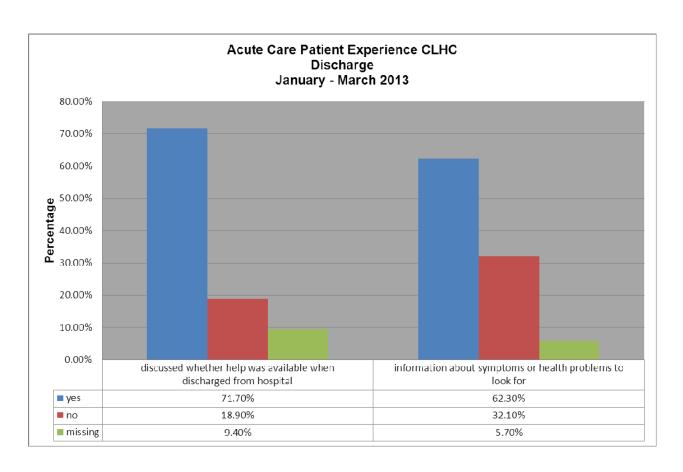

Figure 8. Patient Experience in Hospital

Discharge

Patients were asked whether they had help after discharge from the hospital and whether they had information about symptoms or health problems to look for after they left the hospital (See Figure 9). Seventy one point seven percent reported that they had a discussion with hospital staff about whether they had the help needed when they left the hospital and 62.3% reported that they were given information in writing about what symptoms or health problems to look out for after they left the hospital.

Figure 9. Discharge

Overall Hospital Experience

Patients were asked to rank their hospital stay on a scale of 1 to 10 with 10 being the best. On average, patients ranked their hospital stay at 8.86. Patients were also asked whether they would recommend the hospital to friends and family and of those who responded, 75.5% reported that they definitely would, 17.0% said they probably would, 3.8% said probably no, 1.9% said definitely no, and 1.9% did not report.

Opportunities for Improvement

Opportunities for improvement should be identified for those questions that have less than 80% of respondents reporting a positive response (i.e., always and usually combined or yes).

Appendix A

Acute Care Patient Experience Survey

Acute Care Patient Experience Survey Survey Instructions

- You should only fill out this survey if you were the patient named on the envelope. Do not fill out this survey if you were not the patient.
- Answer all the questions by placing an X in the square to the left of your
- Answer all questions based on your last visit during January, February and March of 2013.
- You are sometimes told to skip over some questions in this survey. When this happens you will see an arrow with a note that tells you what question to

	nappens you will see an arrow with a note that tens you what question to
	answer next, like this: □ Yes
	☐ No → If No, Go to Question 1
	E No 7 II No, Go to Question I
YOU	IR CARE FROM NURSES
	ease indicate at which hospital you last stayed:
	Western Memorial Regional Hospital
	Sir Thomas Roddick Hospital
	Rufus Guinchard Health Centre
	Bonne Bay Health Centre
	Calder Health Centre
	Dr. Charles L. LeGrow Health Centre
2. Du respe	ring this hospital stay, how often did nurses treat you with courtesy and ect?
	Never
	Sometimes
	Usually
	Always
3. Du	ring this hospital stay, how often did nurses listen carefully to you?
	Never
	Sometimes
	Usually
	Always

	uring this hospital stay, how often did nurses explain things in a way you could erstand? Never Sometimes Usually Always
	uring this hospital stay, after you pressed the call button, how often did you get as soon as you wanted it? Never Sometimes Usually Always I never pressed the call button
	JR CARE FROM DOCTORS uring this hospital stay, how often did doctors treat you with courtesy and ect? Never Sometimes Usually Always
7. Du	uring this hospital stay, how often did doctors listen carefully to you? Never Sometimes Usually Always
	uring this hospital stay, how often did doctors explain things in a way you could erstand? Never Sometimes Usually Always

	ring this hospital stay, how often did you feel involved in decisions about your and treatment? Never Sometimes Usually Always
