People, Safety & Quality Branch

Background

Long Term Care at Western Health

Long Term Care (LTC) provides quality institutionally based programs and services within three LTC homes, four Protective Community Residences and four Rural Health Centers. LTC staff work collaboratively with other branches of Western Health in the planning, delivery, and monitoring of LTC programs and services. An interdisciplinary, collaborative model of care is important for delivery of quality LTC programming. Nursing, Social Work, Physiotherapy, Occupational Therapy, Behavior Management, Physicians, Pharmacy, Therapeutic Recreation, and Spiritual Care are all integral parts of the interdisciplinary team within LTC programs and services. In 2020/2021, LTC developed a new Regional LTC Quality Improvement Team composed of residents, family members, clinical staff, and support staff from various LTC sites in the region. As part of Western Health's commitment to quality improvement for residents and their families, it is important to measure resident and family experience. The Quality Improvement Team reviewed and provided input on modifications to the LTC Resident and Family Experience Surveys. The Team, and LTC sites, will use the survey results to guide quality improvement initiatives.

Impact of COVID-19 Pandemic

The World Health Organization declared COVID-19 a global pandemic on March 11, 2021, the world faced profound economic and social impacts. Within Western Health, 2020/2021 was an exception year in many ways. The effects and implications of the pandemic affected all sites, services, and programs throughout the year. LTC residents, families and staff were impacted by many changes in staffing and safety protocols, resident and visitor screening practises, personal protective equipment, program delivery, and visitor restrictions.

Survey Instrument

The validated Consumer Assessment of Healthcare Providers and Systems (CAHPS) Nursing Home Survey: Resident Instrument, developed by Alberta Health Services, was utilized as the basis for the survey administered to LTC residents throughout the Western region. Based on experiences using this survey within Western Health in 2010 and administering a modified version in 2013 and 2015/16, this survey tool was modified in collaboration with the Regional LTC Quality Improvement Team. Questions were modified to fit with current language and terminology for services and providers, to ask about additional services and providers, as well as to help assess the impact of the COVID-19 pandemic on resident experience. This modified tool (Appendix A) was used to evaluate resident experiences and administered electronically through the Get Feedback online survey platform.

Method

Western Health promoted the LTC Family Experience Survey broadly on the organization's website and social media pages throughout the administration period of May 3 to June 25, 2021. The LTC facilities contacted residents' family members through mail or email to share a letter outlining the survey and provide the paper copy and/or electronic link. Each facility identified an individual who was available to administer the survey in-person or over the telephone. Posters were also displayed within the facility. Print copies of the surveys and return boxes were available at the visitor screening booth or LTC check-in areas. Completed print format surveys were transcribed into the Get Feedback platform by staff, students, and/or nurses on ease-back.

Sample

All resident family members were given the opportunity to complete the survey. Across the Western Health region, 342 participants completed the survey.

Privacy, Confidentiality, and Data Security

Privacy and confidentiality were achieved as the residents names were not reported on the surveys. The electronic survey reports are stored in a password-protected account on the Get Feedback online platform. Any information that could potentially identify the family members or resident was deleted. All downloaded data was stored on a password protected computer in the Monaghan Hall office used by Quality staff.

Data Analysis

Survey data was entered directly into Get Feedback by the respondent or transcribed into the platform from paper copies of the survey. Reports were developed and analyzed in this survey platform. Descriptive statistics were calculated to obtain a general perspective of family members' experiences with LTC services at Western Health. The not applicable and I don't know/I am unsure responses were removed from calculations to provide a more accurate representation of the measures. Comments were compiled based on common themes. Statistics were also filtered for each site or grouping of sites where the sample provided sufficient data to assist in quality improvement initiatives. Comparisons to the 2016 results must consider that the 2021 family members are not the same individuals whose loved ones were residing in LTC in 2016. The following report provides survey results for the region.

Results

Demographics

A total of 342 participants completed the survey. This is a significant increase in sample size from the 165 family members who participated in the 2016 survey, compared to an increase in occupancy by 75 residents. The majority of the respondents were from Corner Brook Long Term Care (46%), Western Long Term Care (13%), and Bay St. George Long Term Care (13%). In combination, 23% of the respondents were from the four Rural Health Centres. An additional 6% were from the Protective Community Residences and 3 respondents did not report.

Respondents were asked several questions to gain a more thorough understanding of the demographics of the family members being surveyed and their loved ones living in long term care, including relation to the resident, if the resident was discharged from the facility or had died, how long the resident lived there, and if they expected the family member to live in a long term care home permanently. When asked their relationship to the resident, 15% reported that the resident was their spouse or partner, 54% reported their parent, 4% reported their mother-in-law or father-in-law, 2% reported their grandparent, 4% reported their aunt or uncle, 13% reported their sibling, 4% reported their child, 3% reported their friend, and 2% reported other. In comparison, in 2016, 24.2% reported that the resident was their spouse or partner, 55.8% reported their parent, 3.0% reported their aunt or uncle, 11.5% reported their sibling, 3.6% reported their child, 0.6% reported their friend, 0.6% reported other and 0.6% did not report. This shows some changes in family member composition, with a decrease in spouses/partners completing the survey and an increase in grandchildren and son-/daughter-in-laws completing the survey.

Although efforts were taken to reduce the potential that a family member or next of kin received a survey after the resident had died, eight respondents indicated that the resident was deceased. Of these, three chose to discontinue the survey and five reported based on the residents last six months in the LTC home. The majority (64%) of the respondents indicated that the resident lived in LTC for twelve months or longer, 18% reported six months to almost twelve months, 10% reported three months to almost six months, 5% reported one month to almost three months, and 3% reported less one month. Of the respondents, 91% reported that they expected the resident to live in a LTC home permanently.

Respondents were also asked to indicate whether they were the people who had the most experience with the residents' care and 72% reported yes, 22% reported no, and 6% did not know. Other questions were asked about finances, power of attorney, and substitute decision maker (See Table 1). The majority of the respondents (71%) were the resident's

substitute decision maker and 51% of respondents reported that they had power of attorney.

Table 1. Family Member Involvement and Role

Question	Yes (%)	No (%)	Don't know (%)
In the last six months, did you help your family with managing finances, such as paying bills or filling out insurance claims?	52	48	N/A
Do you have power of attorney for your family member?	51	40	9
Are you your family member's substitute decision maker (next of kin)?	71	21	8

To gain a more thorough understanding of the demographics of the LTC families, respondents were asked about their age, gender, race or ethnicity, and educational background. Of the 320 respondents who reported their age, 1% were 85-94, 13% were 75-84, 37% were 65-74, and 31% were 55-64 and 18% were 54 or under. Of the respondents, 74% were female and 26% were male. The majority of the respondents (91%) identified as white/Caucasian and 9% identified as Indigenous/Aboriginal. Of the respondents, 19% had completed grade school or some high school, 20% completed high school, 17% completed post-secondary technical school, 9% completed some university or college, 19% reported that they completed a college diploma, 13% completed a university degree, and 3% had a postgraduate degree.

Visitation and Activities

Family members were asked questions about virtual visits, designation as essential visitors, and in-person visits during the past six months.

Family members were asked if the visitor restrictions implemented during the previous six months had changed their in-person contact with their family member in LTC. Of the respondents, 23% reported a significant decrease, 43% reported some decrease, 25% reported no change, 7% reported some increase, and 3% reported a significant increase.

Family members were asked if, over the last six months, they were designated as an essential visitor or support person for their family member. Of the respondents, 70% reported yes and 30% reported no. Those designated as essential visitors or support persons were asked about how many times they visited the resident in the past six months.

Of the respondents, the majority (69%) reported more than 20 times, 19% reported 11-20 times, 5% reported 6-10 times, 6% reported 2-5 times, and 2% reported 0-1 times.

Family members were asked about frequency, purpose, and satisfaction with virtual visits, which were defined as talking on the phone or having video calls (Face Time, Google Duo, etc.). Of the respondents, 59% reporting having virtual visits and 41% reported they did not have virtual visits. Of those who had virtual visits, 18% reported daily visits, 22% reported several times per week, 35% reported weekly, 10% reported having visits several times per month, and 15% monthly or less. Of those who had virtual visits, 70% reported that they had virtual visits because they could not visit in-person due to restrictions, 31% had virtual visits to have additional contact with their family member between their in-person visits, and 15% of respondents reported that they had virtual visits because they live too far away for in-person visits. When asked if they had enough virtual visits to meet their family member's needs, 82% of respondents reported yes and 18% reported no.

Family members also provided comments on their experiences with visitor restrictions and virtual visits. The main theme throughout the comments was that family members were very proud of how residents were kept safe and, overall understood the reason for the measures in place. Some family members provided positive comments and were pleased with how in-person visitation was handled and organized, while others expressed frustration with the limited number of in-person visitors and the length and frequency of in-visits. Some family members expressed confusion about discrepancies in visitation and the fact that visitors were limited while some residents were able to leave the facility to visit with family and shop at local businesses. Family members also expressed concerns that limited in-person visitation negatively impacted on their loved ones health, specifically in relation to not being able to supplement meals and help with eating and drinking. The main theme regarding virtual visits was appreciation for the opportunity. However, some family members experienced difficulty with scheduling and organization of virtual visits. Others explained that their loved one was unable to benefit from virtual visits due to difficulty with focus, hearing, or seeing the screen.

The most common suggestion for change made by family members was that visitors should be able to come and go throughout the day. Another common recommendation was that all residents should have at least one designated essential visitor at all times. Family members also commonly expressed concerns with residents being limited to six visitors, often remarking that this resulted in children and other family not being able to visit. Suggestions were made to increase the overall number of visitors, allow family visits, as well as to change the visitor list more frequently. Family members also commonly suggested that they should have more access to spaces and programs within the facility.

While family members were not asked quantitative questions about the activities available to their loved ones, the need to enhance and increase frequency activities was a common theme in the comments family members provided. Comments were equally shared between two themes. The first was concern that residents were left alone or in their beds/wheelchairs too long and the second was concern that residents needed more activity and stimulation. Suggestions for improvement in activities included providing more of each personal attention, exercise, time outside, socialization, and small group or floor/unit group activities.

The survey results highlighted the importance of supporting visitors to be present as much as feasible and safe. The results of the survey also indicate opportunities for improvement in the variety and frequency of activities available to residents.

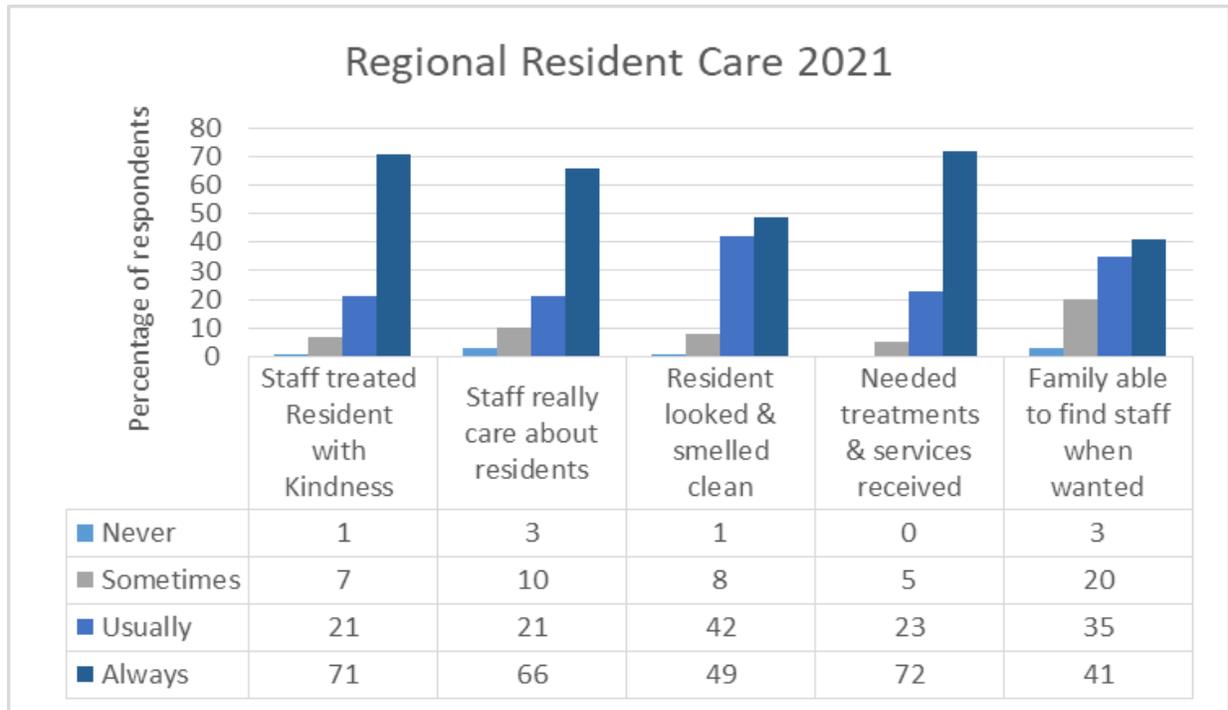

Resident Care

Several questions were asked about health care in terms of the respondents' perspective and experiences over the past six months (See Figure 1). Respondents were asked how often they felt that there was enough nursing staff in the LTC home and, of the respondents, 26% reported always, 33% reported usually, 26% reported sometimes, and 16% reported never. When asked if their family member received all of the health care services and treatments they needed over the past six months, 95% of respondents reported usually or always. When asked if their satisfaction with their family member's access to programs and services had changed because of the pandemic, 77% of respondents reported no change, 17% reported decreased satisfaction, and 6% reported increase satisfaction. When asked if their satisfaction with their family member's access to the health care staff had changed because of the pandemic, 87% of respondents reported no change, 5% reported decreased satisfaction, and 8% reported increased satisfaction.

The majority of the respondents reported that they had always or usually seen the health care team treat the resident with kindness (92%) and that they always or usually felt that the health care staff really cared about the resident (87%). These are both comparable to the 2016 results, in which 89% reported nursing staff were kind and 87% reported nursing staff really cared.

Respondents were asked how often the resident looked and smelled clean in the last six months and 91% reported usually or always. This is an increase from 88.5% reported in 2016. Family members were also asked if they had ever seen the LTC home staff fail to protect any resident's privacy while the resident was dressing, showering, bathing, or in a public area and 98% of respondents reported no.

Figure 1. Resident Care

Respondents were asked about their satisfaction with the care provided to their family member by specific services or providers. Overall, 80% or more of the respondents were usually or always satisfied with each of the services or providers. Results for those respondents whose family members availed of the services are outlined in Table 2.

Table 2. Family Member Satisfaction with Services/Providers (percent of respondents)

	Never (%)	Sometimes (%)	Usually (%)	Always (%)
Nursing staff	0	8	23	68
Doctor/Nurse Practitioner	1	8	22	69
Occupational Therapy	7	8	18	66
Physiotherapy	8	8	20	64
Recreation Therapy	4	11	17	68
Social Work	2	7	19	72
Spiritual Care	9	12	21	59

Respondents were also asked in their satisfaction with their family member’s overall care changed because of the pandemic. Of the respondents, 71% reported no change, 7% reported a decrease in satisfaction, and 8% reported an increase in satisfaction.

Respondents were asked if in the last six months, they saw any resident behave in a way that made it hard for LTC staff to provide care such as yelling, pushing, or hitting. Of the 63% who reported seeing this happen, 57% reported that the staff always or usually handled this situation in a way that they felt was appropriate. This was a decrease from 2016, when 95.7% reported that the nurses and aides always or usually handled this situation in a way that they felt was appropriate. When asked if they had ever seen any health care staff be rude to their loved one or any other resident, 86% reported never, 12% reported sometimes, and 2% reported always. This is comparable to 85.5% who reported no in 2016.

Respondents were asked if they helped with the care of the resident when they visited and 74% reported yes, while 16% reported that they felt the long term care home staff expected them to help. This is an increase from 2016, when 61.2% reported yes and 5.5% reported that they felt staff expected them to help.

Family members were also asked questions about whether they helped residents with specific aspects of their care over the past six months and if this was because they chose to help or if it was because the staff either did not help or made the resident wait too long. When asked if they had helped the resident with eating, 33% reported that they did not help, 66% reported that they chose to help on their own, and 1% reported that they helped because staff did not help or made the resident wait too long. When asked if they had helped the resident with drinking, 29% reported that they did not help, 68% reported that they chose to help on their own, and 2% reported that they helped because staff did not help or made the resident wait too long. Respondents were also asked if they helped the resident with toileting and 70% reported that they did not help, 25% reported that they chose to help on their own, and 5% reported that they helped because staff did not help or made the resident wait too long. As shown in Table 3, in comparison to the 2016 results, there was an increase in family members helping with each aspect of care and also a significant decrease in family members reporting that they helped because staff did not or made the resident wait too long.

Table 3. Help with Care (%)

	Helped with care (general) (%)		Helped with eating (%)		Helped with drinking (%)		Helped with toileting (%)	
	2016	2021	2016	2021	2016	2021	2016	2021
Helped with care (total)	61.2	74	40	67	39	71	16.4	30
Helped because staff made resident wait too long	n/a	n/a	9.1	1	7.9	2	14	5

A common theme in family members' comments was that the LTC home was understaffed and staff were overworked. Some family members also noted that being understaffed caused or risked neglect, worsened care, or delays in care. Most comments focused on nursing care; however, the need for additional staffing or extended hours in housekeeping and recreation was also noted. Several family members also provided suggestions to have more services on-site, including rehab, physiotherapy, hearing clinics, and eye clinics.

Family members provided comments regarding the overall care their loved ones received in LTC and their satisfaction with their loved ones cleanliness. The majority of comments provided were that family members were very happy, pleased, or appreciative of the care provided. Some respondents provided specific positives regarding hygiene and help with care. Of those who raised concerns about care, the common theme presented was that residents need to be checked on and changed more frequently. Family members also raised concerns about residents' clothes and faces not being cleaned after meals, teeth not being brushed, hair being unkempt, and feet being cold and lacking socks.

Family members also provided comments regarding their experience and satisfaction with the LTC staff. The main theme was that family members are largely satisfied with the LTC staff. Common positive statements about staff included that staff were approachable, helpful, amazing, and excellent. Many family members also provided specific compliments. One such example is, "I believe it goes well beyond a job. I'm sure it's genuine love for the people they serve". Negative comments were also provided, often prefaced with 'some staff' or 'at times'. The common themes in the negative comments included staff not answering buzzers, as well as being rude, abrasive, lacking compassion, or rough in providing cares. The most common recommendation related to care was for staff to have more training in dementia and dementia care. The other common recommendation was to improve safety measures regarding falls and fall prevention, including improving the alarm bell system.

Resident Health and Wellness

Respondents were asked about the health and wellness of their family member residing in the LTC home. The majority (70%) reported that their family member has serious memory problems because of Alzheimer's disease, dementia, stroke, accident, or something else. Family members were asked how often the resident was able to make decisions about his or her own daily life, such as when to get up, what clothes to wear, and which activities to do. The majority of the respondents (44%) reported never, 30% reported sometimes, 12% reported usually, and 15% reported always.

Family members were asked to indicate how they would rate their family member's overall mood or emotional wellbeing. Of the respondents, 9% reported excellent, 29% reported very good, 34% reported good, 22% reported fair, and 6% reported poor. Family members

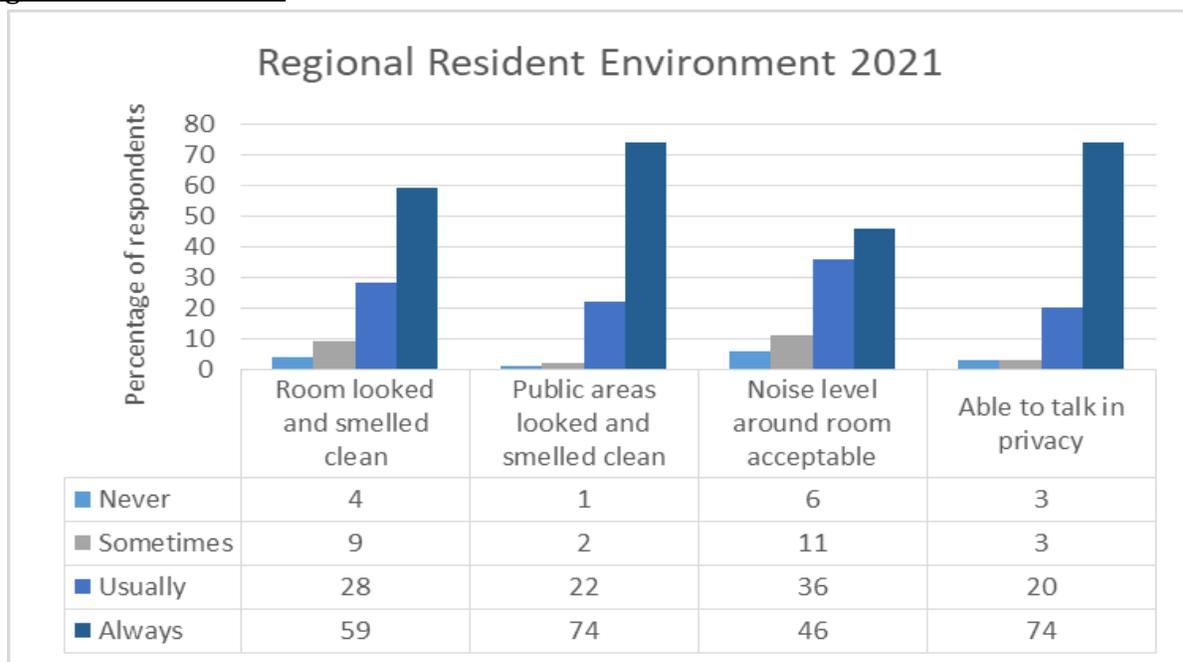

were also asked to indicate how their family member’s mood had changed because of the pandemic. Of the respondents, 57% reported no change, 28% reported a little worse, 13% reported significantly worse, 1% reported a little better, and 2% reported significantly better.

Environment

Respondents were asked to report on various aspects of the environment based on the last six months (See Figure 2). When respondents were asked how often the residents’ room looked and smelled clean, 87% report usually or always, while 96% reported that the public areas looked and smelled clean. Respondents were also asked if their satisfaction with the cleanliness of the facility changed because of the pandemic and 79% of respondents reported no change, 2% reported decreased satisfaction, and 19% reported increased satisfaction.

The majority of the respondents (82%) reported that the noise level around the residents’ room was acceptable to them. Privacy is also an important aspect of long term care. When respondents were asked how often they were able to find places to talk to the resident in private, 94% reported usually or always. Respondents reported that the majority of their family members had a private room, with only 21% having shared a room with another person at the LTC home within the last six months.

Figure 2. Environment

The common theme in family members' comments about noise level in the LTC home was that other residents can be loud and bother their loved ones at times. Family members also provided comments about the LTC buildings and cleanliness. A slight majority of responses indicated satisfaction with the site cleanliness, while others expressed concern with the cleanliness. Comments about areas needing enhanced cleaning included rooms, chairs, bed trays, bed clothes, and mattresses. Other suggestions for improvement included providing shaded outdoor space and ensuring entrances are big enough for wheelchairs.

Residents' Personal Belongings

Questions were asked related to personal belongings over the last six months. When asked how often residents' personal medical belongings (e.g., dentures, hearing aids, eye glasses) were clean and in good condition, 3% reported never, 14% reported sometimes, 35% reported usually, and 49% reported always. When asked how often residents' personal medical belongings were damaged or lost, 69% of respondents reported never, 27% reported sometimes, 2% reported usually, and 3% reported always. When asked how often clothes that were cleaned by LTC's laundry services were damaged or lost, of those who used the service, 45% reported never, 46% reported sometimes, 2% reported usually, and 6% reported always.

Family members also provided comments about their experiences with residents' personal belongings. The most common concern was personal items and laundry being lost. The other common concerns were items being misplaced or mixed-up with those of other residents, clothing being mislabelled, and clothes being wrinkled or not put away properly.

Residents' Meals

Family members were asked about their satisfaction with various aspects of the meals provided to their family member at the LTC home. The majority of the respondents were usually or always satisfied with the visual appeal (78%), taste (73%), temperature (76%), and mealtime experience (84%). When asked if their satisfaction with the meals provided to their family member had changed because of the pandemic, 90% of respondents reported no change, 3% reported decreased satisfaction, and 7% reported increased satisfaction. When asked if their satisfaction with their family member's mealtime experience (how meals are served) had changed because of the pandemic, 88% of respondents reported no change, 5% reported decreased satisfaction, and 7% reported increased satisfaction.

Common themes in family members' comments about the meals provided in LTC were a lack of variety and concerns with food quality.

Access, Communication, and Family Involvement

Respondents were asked several questions about overall care and communication with the health care team in the last six months. Of those who reported that they had tried to find health care staff, 76% reported they could usually or always find one when they wanted one, which is a decrease from 86.6% in 2016. When asked if their satisfaction with their access to the health care staff had changed because of the pandemic, 83% of respondents reported no change, 8% reported decreased satisfaction, and 8% reported increased satisfaction. The significant majority (94%) of the respondents reported that the health care team always or usually treated them with courtesy and respect.

Questions about obtaining information were asked in relation to the last six months. Of the respondents, 88% reported that they usually or always received the information they needed about their family member, an increase from approximately 74% in 2016. When asked if things were explained in a way that was easy for them to understand, 93% reported usually or always. When asked if they were discouraged from asking questions about their family member, 82% of respondents reported never, 11% reported sometimes, 2% reported usually, and 2% reported always. Respondents were asked if they got all of the information they wanted about payments or expenses. Of the 65% of respondents who asked for this information, 93% usually or always got all the information they wanted.

When respondents were asked if they were ever unhappy with the care the resident received, 25% of respondents reported yes and 75% reported no. Of those who reported having concerns, 88% reported that they spoke to long term care home staff about this concern and 45% were usually or always satisfied with the way the staff handled these problems, 49% were sometimes satisfied, and 6% were never satisfied. These results are comparable those from the 2016 survey, with the exception that only 13% of respondents reported that they stopped themselves from talking to any long term care home staff about their concerns because they thought staff would take it out on the resident, which is a significant decrease from the 47.3% who reported stopping themselves from doing so in 2016.

Family members were asked about their involvement in care and experience with case conferences. Of the respondents, 92% reported being involved in decisions about the residents' care over the last six months, and increase from 81.2% in 2016. Of those who were involved in decisions, 84% reported being usually or always involved as much as they wanted to be, also an increase from 80.0% in 2016. Respondents were asked about whether they had been part of a care conference over the last 12 months, either in person by telephone or by videoconference. Of the respondents, 50% reported yes, 9% reported no because they chose not to attend, 27% reported no because they were not given the opportunity, and 15% reported that they did not know or were unsure.

Family members provided comments about communication with the health care staff. The majority of the comments were that family members were kept informed. Family members noted feeling part of the team and that staff were always willing to listen. However, not all families had this experience, concerns included lack of explanation during family members' admission, confusion over roles and responsibilities, sometimes no response, and that notes left for the health care team were not followed and went missing. Another common theme in family members' comments was that there was a lack of communication among staff, with a focus on care plans not being communicated.

Overall

When asked to rate the LTC home, on average, respondents rated the home at 8.20 (range 0-10; 0 being the worst possible and 10 being the best possible). This is a slight decrease from an overall rating of 8.43 in 2016. When family members were asked to rate the overall care their family member received at the LTC home, the respondents rated overall care at 8.56 (range 0-10; 0 being the worst possible and 10 being the best possible). This is also a slight decrease from 8.63 in 2016.

Respondents were also asked if they felt that the protocols and restriction put in place during the pandemic have worked to keep their family member safe from getting COVID-19. Of the respondents, 74% reported definitely yes, 21% reported probably yes, 3% reported probably no, and 2% reported definitely no.

Family members also provided some general comments about their experiences. Two common themes were general concerns with protocols and accountability in LTC, as well several suggestions to provide various electronic payment options.

Strengths and Opportunities for Improvement

Overall results indicate that Western Health's LTC services have many strengths, including availability and kindness of the health care staff and the involvement of family members in decision making. Respondents also reported being satisfied with the overall care of their family member and their own treatment by staff. Other overall strengths include cleanliness of the physical environment, noise level, and privacy.

Regionally, the survey identified the following areas to explore for opportunities for improvement:

- Variety and frequency of recreation activities;
- Quality and variety of meals;
- Staffing levels;
- Effectiveness of responses to resident behaviours such as yelling, pushing or hitting;

- Frequency of resident checks and changes
- Fall prevention protocols and devices/alarm systems
- Effectiveness of problem solving strategies and communication with families when concerns arise;
- Communication among health care staff, with a focus on care plans;
- Protection against loss or damage of residents' clothing and personal medical belongings; and
- Staff training opportunities regarding dementia and dementia care.

The survey results also suggest that LTC leadership consider advocating for the designation of an essential visitor for every resident at all times, as well as enhanced protocols during visitation restrictions that consider extenuating circumstances for residents with large families.

Appendix A

Western Health Family Experience Survey 2021

Long Term Care Family Experience Survey

This survey is part of our efforts to understand how families view their experience of having a loved one in long term care. Any information that you decide to share will help us identify areas for improvement. Western Health will post a summary of the information from all families who respond on our website: www.westernhealth.nl.ca. This report will be available in September 2021.

If you prefer to complete the survey electronically, it is available here: www.westernhealth.nl.ca/survey

We hope that you will take the time to complete the survey. Your participation is greatly appreciated. Your participation in this survey is voluntary and will not affect your loved ones health care. We have prepared the survey to be anonymous and will not identify you as a participant. Please complete the survey by June 25, 2021.

If you have any questions about the survey, please call Tracey Wells-Stratton, Regional Manager Research and Evaluation at (709)784-6801, or email her at traceywells@westernhealth.nl.ca. Thank you for helping to improve long term care in the Western region.

1. For this survey, the phrase "family member" refers to the resident in long term care. At which Long Term Care (LTC) facility does your family member live?

Mark only one oval.

- Dr. Charles L. LeGrow Health Centre (Port Aux Basques)
- Calder Health Care Centre (Burgeo)
- Bay St. George Long Term Care Centre (Stephenville Crossing)
- Corner Brook Long Term Care (Corner Brook)
- Protective Community Residences (Corner Brook)
- Western Long Term Care (Corner Brook)
- Bonne Bay Health Centre (Bonne Bay)
- Rufus Guinchard Health Centre (Port Saunders)

2. Overall, how would you rate this LTC Home? 0 is the worst possible & 10 is the best possible

Mark only one oval.

	0	1	2	3	4	5	6	7	8	9	10	
Worst possible	<input type="radio"/>	Best possible										

3. Is your family member now living in long term care?

Mark only one oval.

Yes Skip to question 5

No

4. Was your family member discharged from this facility or is he/she deceased?

Mark only one oval.

Discharged - if you checked discharged, please stop completing this survey and submit.

Deceased - If your family member is deceased, we understand that you may not want to fill out a survey at this time. If this is the case, please check the box indicating that your family member is deceased and submit the survey.

Deceased - If your family member is deceased, we understand that you may not want to fill out a survey at this time. However, if you would like to do the rest of the survey, we would be grateful for your feedback. Please answer the questions based on your family member's last six months at the nursing home. Thank you for your help.

5. In total, about how long has your family member lived in this LTC home?

Mark only one oval.

Less than 1 month

1 month to almost 3 months

3 months to almost 6 months

6 months to almost 12 months

12 months or longer

6. Do you expect your family member to live in this or any other LTC home permanently?

Mark only one oval.

Yes

No

I don't know / I am not sure

7. In the last 6 months, has your family member ever shared a room with another person at this LTC home?

Mark only one oval.

- Yes
 No

8. Does your family member have serious memory problems because of Alzheimer's disease, dementia, stroke, accident, or something else?
